

RESET DAYS ACCORDING TO MONTHS

- **Main Idea of Task : (REST DAYS)**

We need to reset counters of Days according to number that displays in Months 7 segment.

So we first have to determine months that we rest at 31 or 30 or 28 days .

1,3,5,7,8,10,12 → 31 Days

4,6,9,11 → 30 Days

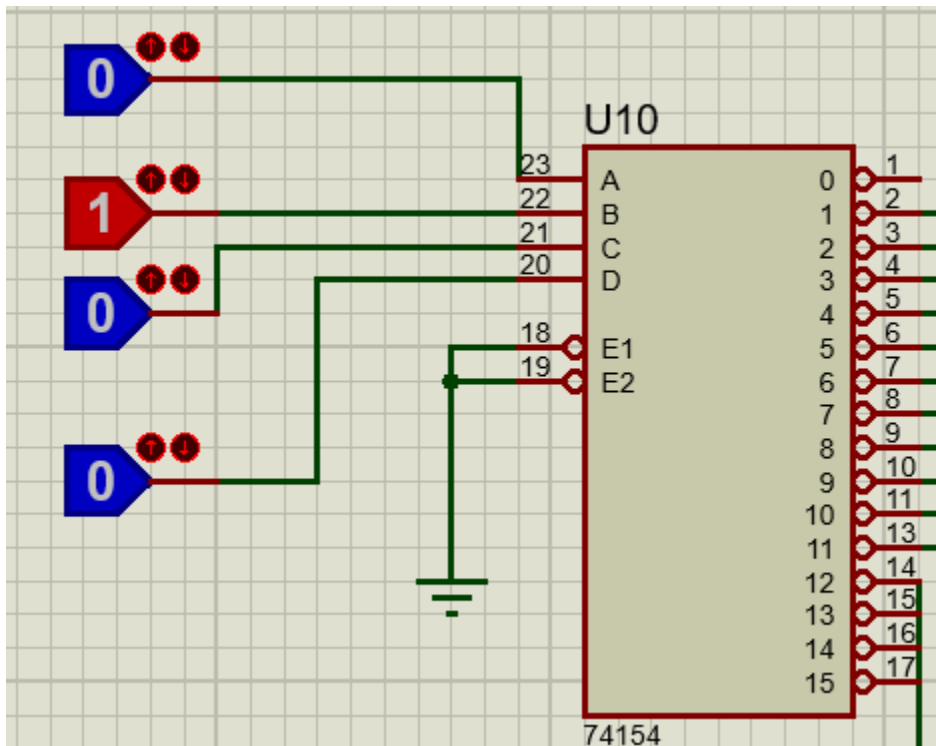

2 → 28 Days

Month	Num of days
1	31
2	28
3	31
4	30
5	31
6	30
7	31
8	31
9	30
10	31
11	30
12	31

Element used and its usage

1- 74154 Decoder

It takes input as binary and converts it to decimal active low

2- 2 Nand gates

Because of active low of Decoder we use Nand instead of OR

NAND GATE

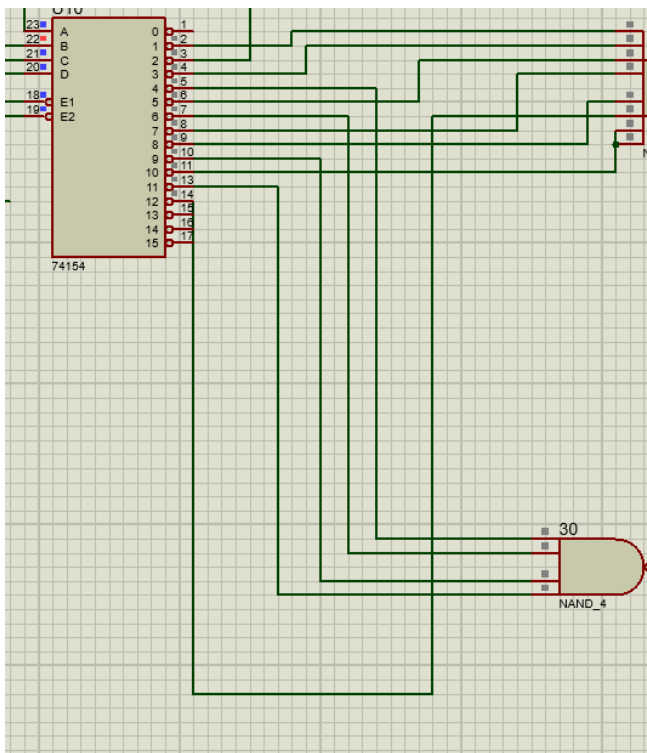

Truth Table

INPUT		OUTPUT
A	B	A NAND B
0	0	1
0	1	1
1	0	1
1	1	0

This Nand to 31-day months it is connected with(1,3,5,7,8,10,12) if any of them = 0 its output=1

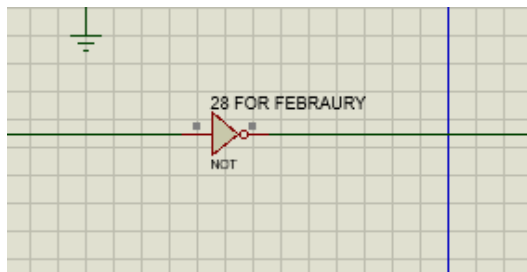

This Nand to 30-day months it is connected with(4 ,6 ,9,11) if any of them = 0 its output=1

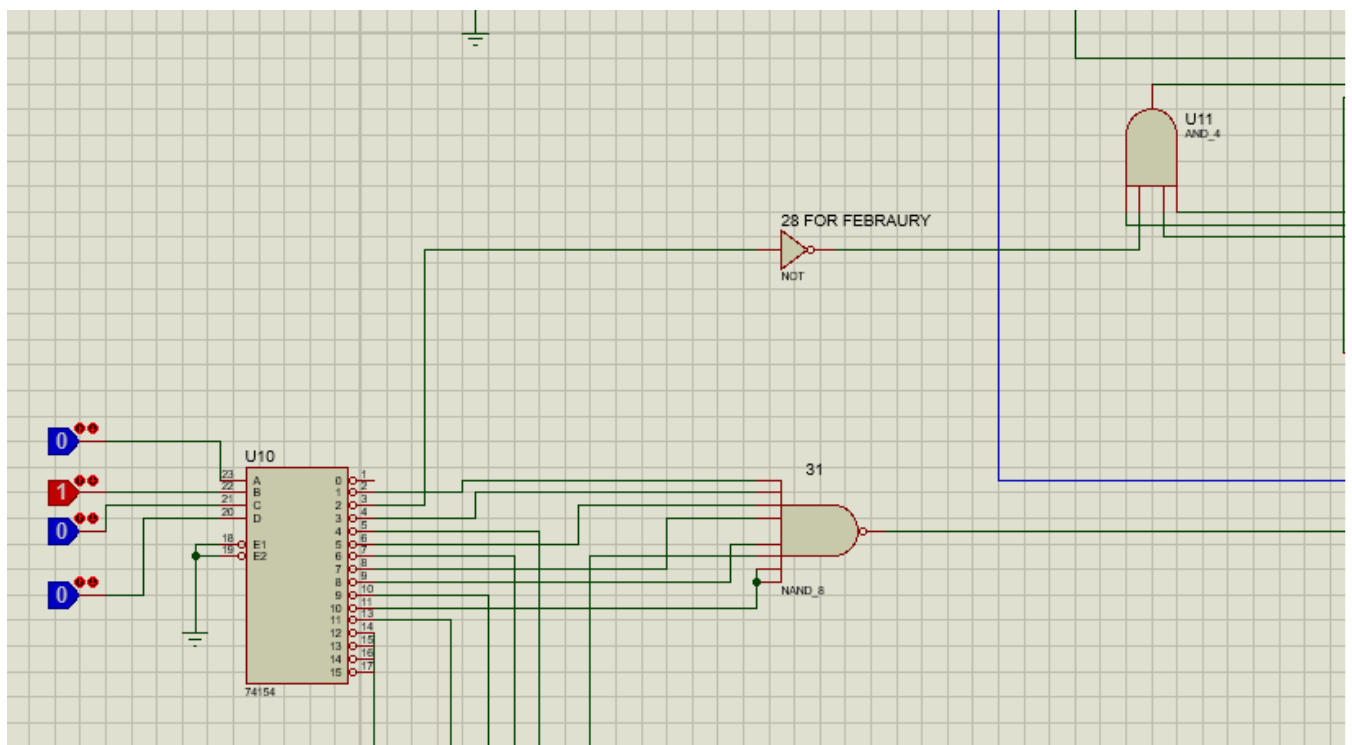

3- NOT gate: it is toggle input
if input=0 → output=1

It is connected with month 2 .

4- AND gates : Its Task to check months and days .

For example : if month is 2 and days that display in 7 segment is 28 its output would be 1

And so on with other AND Gates .

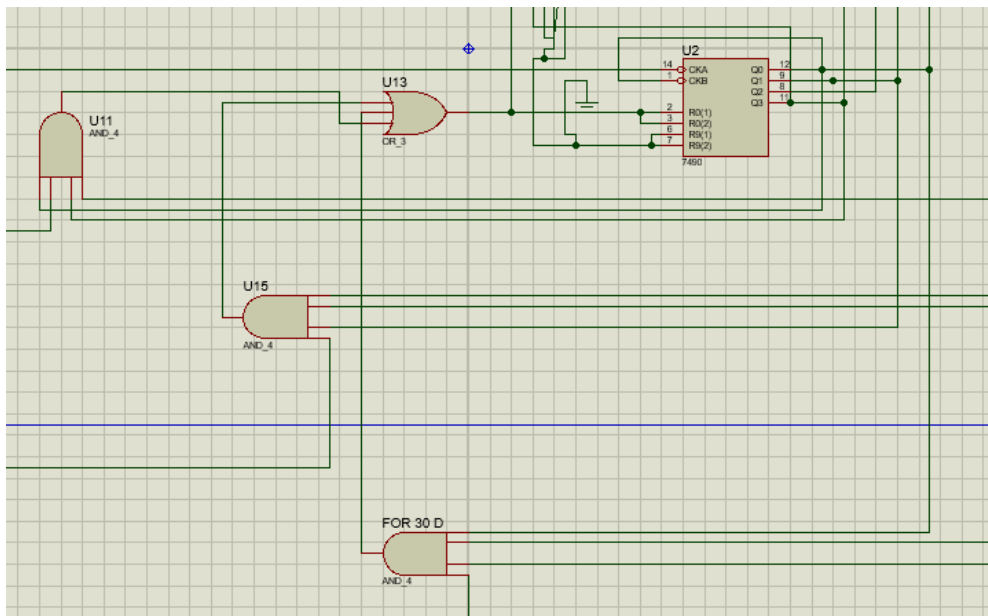

5- OR-3 gates:

If the output from any AND =1 then \rightarrow output=1

TRUTH TABLE

INPUTS			OUTPUT
W	X	Y	Z
0	0	0	0
0	0	1	1
0	1	0	1
0	1	1	1
1	0	0	1
1	0	1	1
1	1	0	1
1	1	1	1

Then output of this OR would rest counters.
